Why Steel Construction is Better than Concrete Building

- More environmental friendly than standard cement or classic type buildings
- No maintenance, Energy Efficient.
- Steel building construction is CHEAP and FASTER installation.
- Never needs to be painted, it is an investment that lasts a lifetime !
- Costs less to build than conventional methods, usually around 40%.
- Don't attract termites and fire resistant which means lower insurance
- Are sturdy, weather tight withstands the extremes of nature elements.
- Have high quality finishing that is available in a variety of colors.
- Engineered to the provided load requirements.
- Can accommodate any design in imagination!
- Can span further dimensions than conventional methods.
